

ROPES AND BANDS

FOR INDUSTRY, IRON GOODS INDUSTRY AND BOATING

Marvelli Michele S.r.l.

Company

Profile, story and philosophy

Our story started in 1800, when Antonio Allavelli set up his handicraft workshop. The art of the rope was passionately handed on from father to son until the '70s, when Alfonso Allavelli assumed the reins of the company and, by investing in new equipment and enlarging the range of products, converted it into a real industry.

During the '80s his sons started supporting him in creating a modern and technologically advanced structure, ready to meet the needs of their customers all over Europe and the world. The Allavelli Michele srl is today a dynamic and growing enterprise, located on a 5000sqm area, with automatic and computerized equipment supported by an internal technical lab.

The factory produces - with a particular care for quality and service - BRAIDS, TAPES, ROPES and similar items, especially for the INDUSTRIES AND HARDWARE SHOPS, BOATING AND FISHING, AND BAGS' INDUSTRY.

The results we have obtained

up until now, with the continuous trust of our customers, encourages us to always do our best, so that we can offer a high quality product at a competitive cost.

Products

From industry to boating

BAGS' MANUFACTURING

- COTTON BRAIDS
Elite line
- COTTON BRAIDS
for automatic machines
- POLYPROPYLENE BRAIDS

Available in various standard colours and in special PANTONE colours.
Supplied in rolls or cut upon request with oblique or hot cutting.

- Medium and high tenacity POLYESTER, NYLON AND POLYPROPYLENE BRAIDS AND ROPES
- POLYESTER OR NYLON DOUBLE BRAIDS
- WATER-SKI POLYTHENE BRAIDS
- YACHT COMBED POLYESTER CORDS
- SURFING BRAIDS
- PALAMITE BRAIDS
- ELASTIC BRAIDS

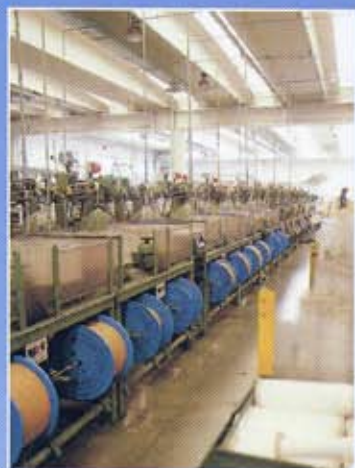

Production

From raw material to finished product

Our production cycle is carried out using technologically advanced machinery assuring a precise control during all the manufacturing phases.

PHASE 1 - The raw materials (cotton, acrylic, nylon, polypropylene and polyester) are checked and, after a careful quality control, they are processed in order to be braided, twisted or weaved.

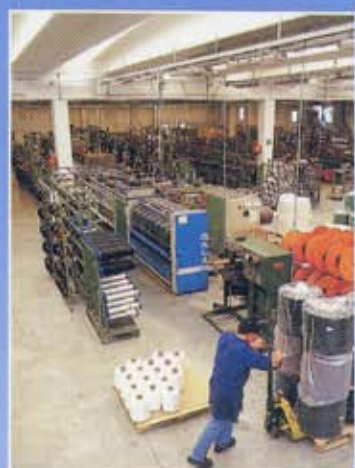

PHASE 2 - All our items are prepared using automatic machinery so each

manufacturing phase is carried out precisely.

PHASE 3 - The product is checked in our technical lab.

PHASE 4 - The finished product is rolled or cut into the lengths required by the customer, then finally packed ready to be shipped.

Services

Quickness, flexibility and personalization

Our willingness in trying to meet our customers' requests, the quickness in dispatching the orders and our competence, which is the result of a ten-years experience in this sector, are an integrated part of the services we offer.

Another important aspect is our wide range of products, with a wide choice in colours as well as the opportunity to have articles customised as regards manufacture and Pantone colors.

Last but not least is the quality

control carried out in the technical lab in our factory.
